# Introduction

---

- **Objective:** Analyze Google Play Store dataset to discover app trends, pricing effects, and factors affecting ratings & installs.
- **Why important:** Helps app developers & marketers improve app visibility and user satisfaction.
- Dataset contains both free & paid apps across multiple categories.

# Dataset Overview

---

- **Source:** googleplaystore.csv
- **Total apps:** ~10,000+
- **Key columns:** Name, Category, Rating, Reviews, Size, Installs, Type, Price, Last Updated
- Missing values in ratings, size, and price handled

Columns: ['App', 'Category', 'Rating', 'Reviews', 'Size', 'Installs', 'Type', 'Price', 'Content Rating', 'Genres', 'Last Updated', 'Current Ver', 'Android Ver']

First rows:

# Tools & Libraries

- **Tools:**

- **Python 3** with Jupyter Notebook

- **Libraries:**

- **Pandas** – Used for data cleaning & manipulation
- **Numpy** – Used for numerical calculations
- **Matplotlib** – Used for plotting and graphs
- **Seaborn** – Used for advanced data visualization

# Data Cleaning Steps

---

- Removed duplicates
- Converted numeric fields: Reviews, Installs, Price, Size
- Parsed Last Updated → Date & App Age
- Imputed missing ratings by category median
- Created Price Bucket, Size Bucket, Rating Group

# Feature Engineering

---

- **Price Bucket:** Free, Cheap, Mid, Premium
- **Size Bucket:** Small, Medium, Large
- **Rating Group:** Low, Medium, High
- **App Age (days):** Time since last update
- **Installs per MB:** Efficiency metric

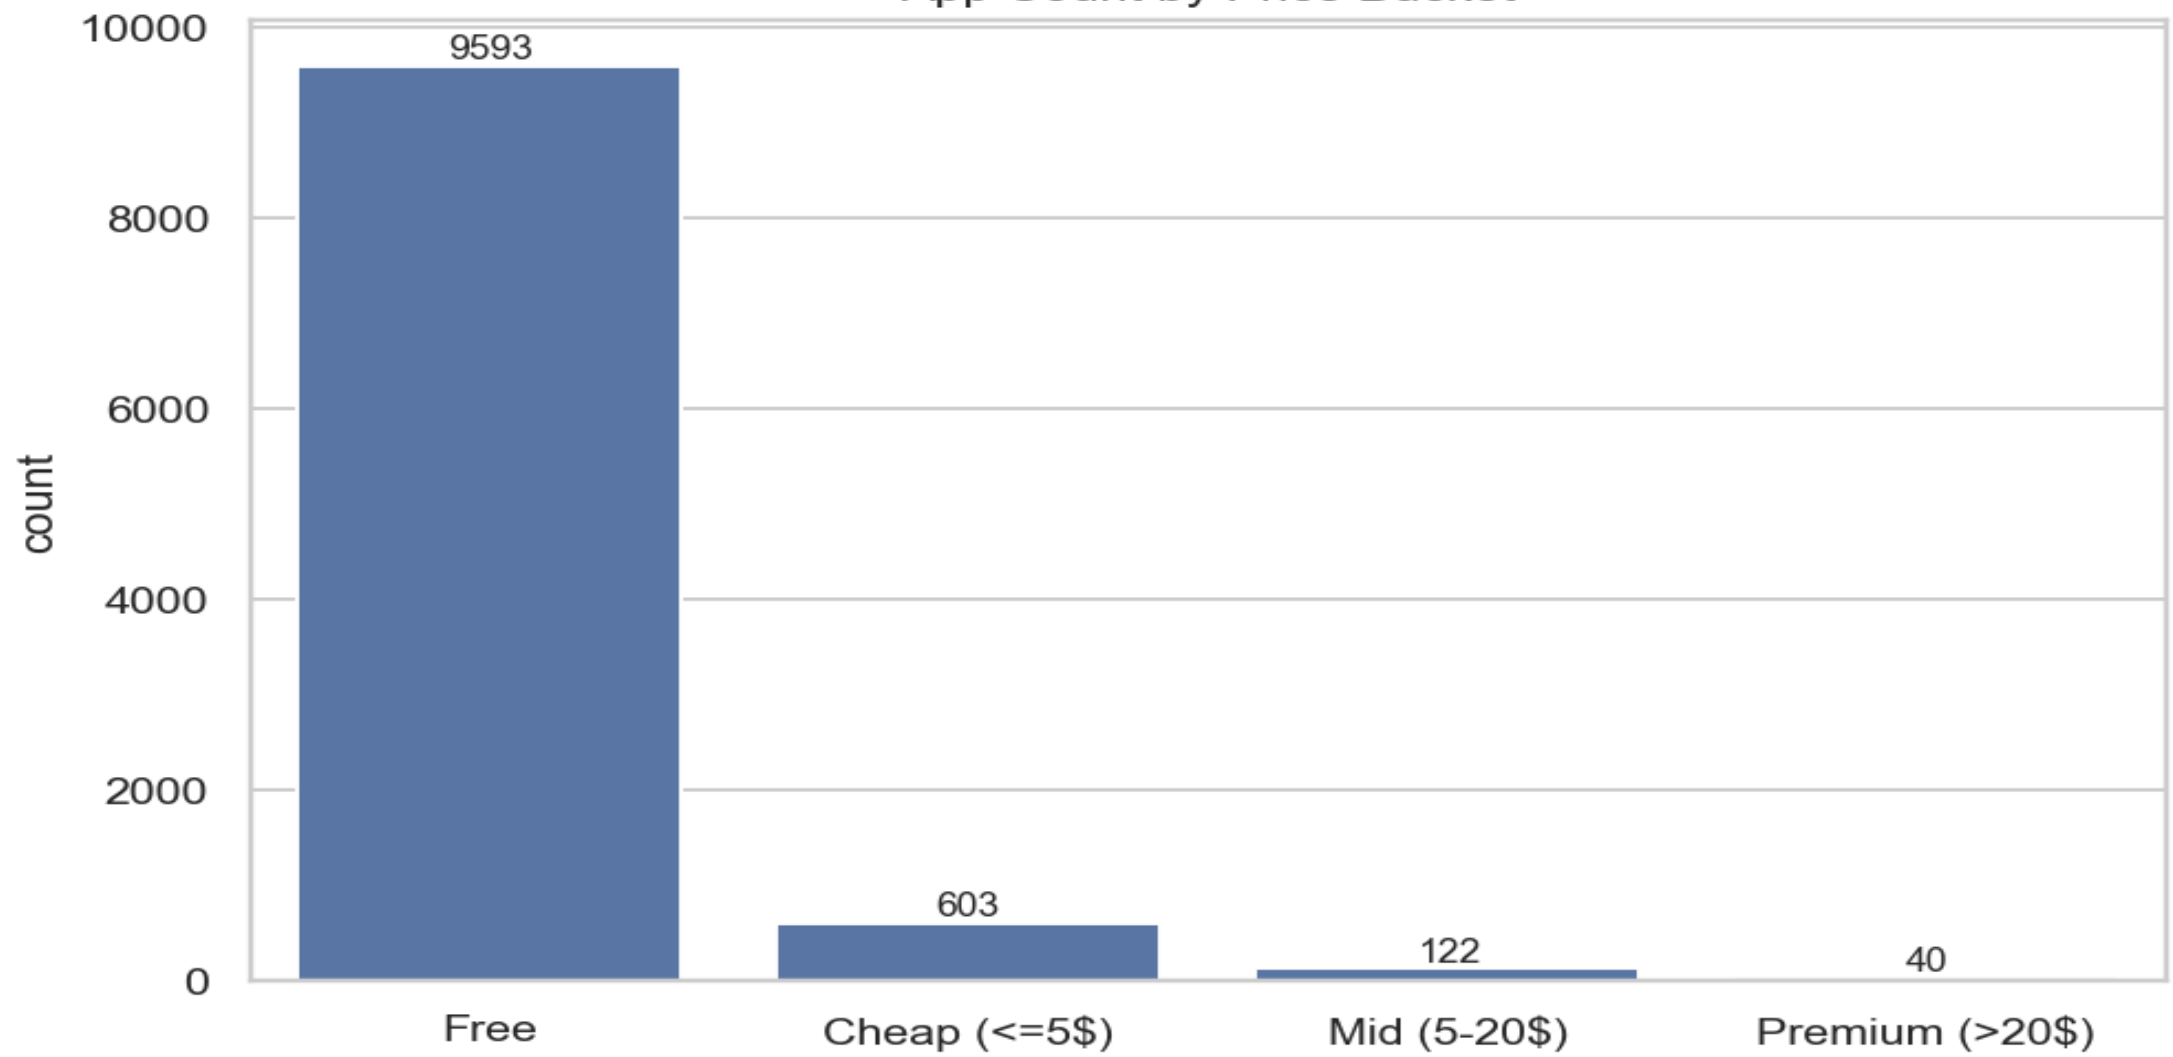

# App Count by Price Bucket

---

- Majority of apps are free (~90%)
- Few premium apps (> \$20)
- Cheap apps dominate paid segment

App Count by Price Bucket

# Average Rating by Size Category

---

- Small (<10MB) & Medium (10–50MB) apps have slightly higher ratings than large apps
- Possible reason: smaller apps run on more devices, better user reach

Average Rating by App Size Category

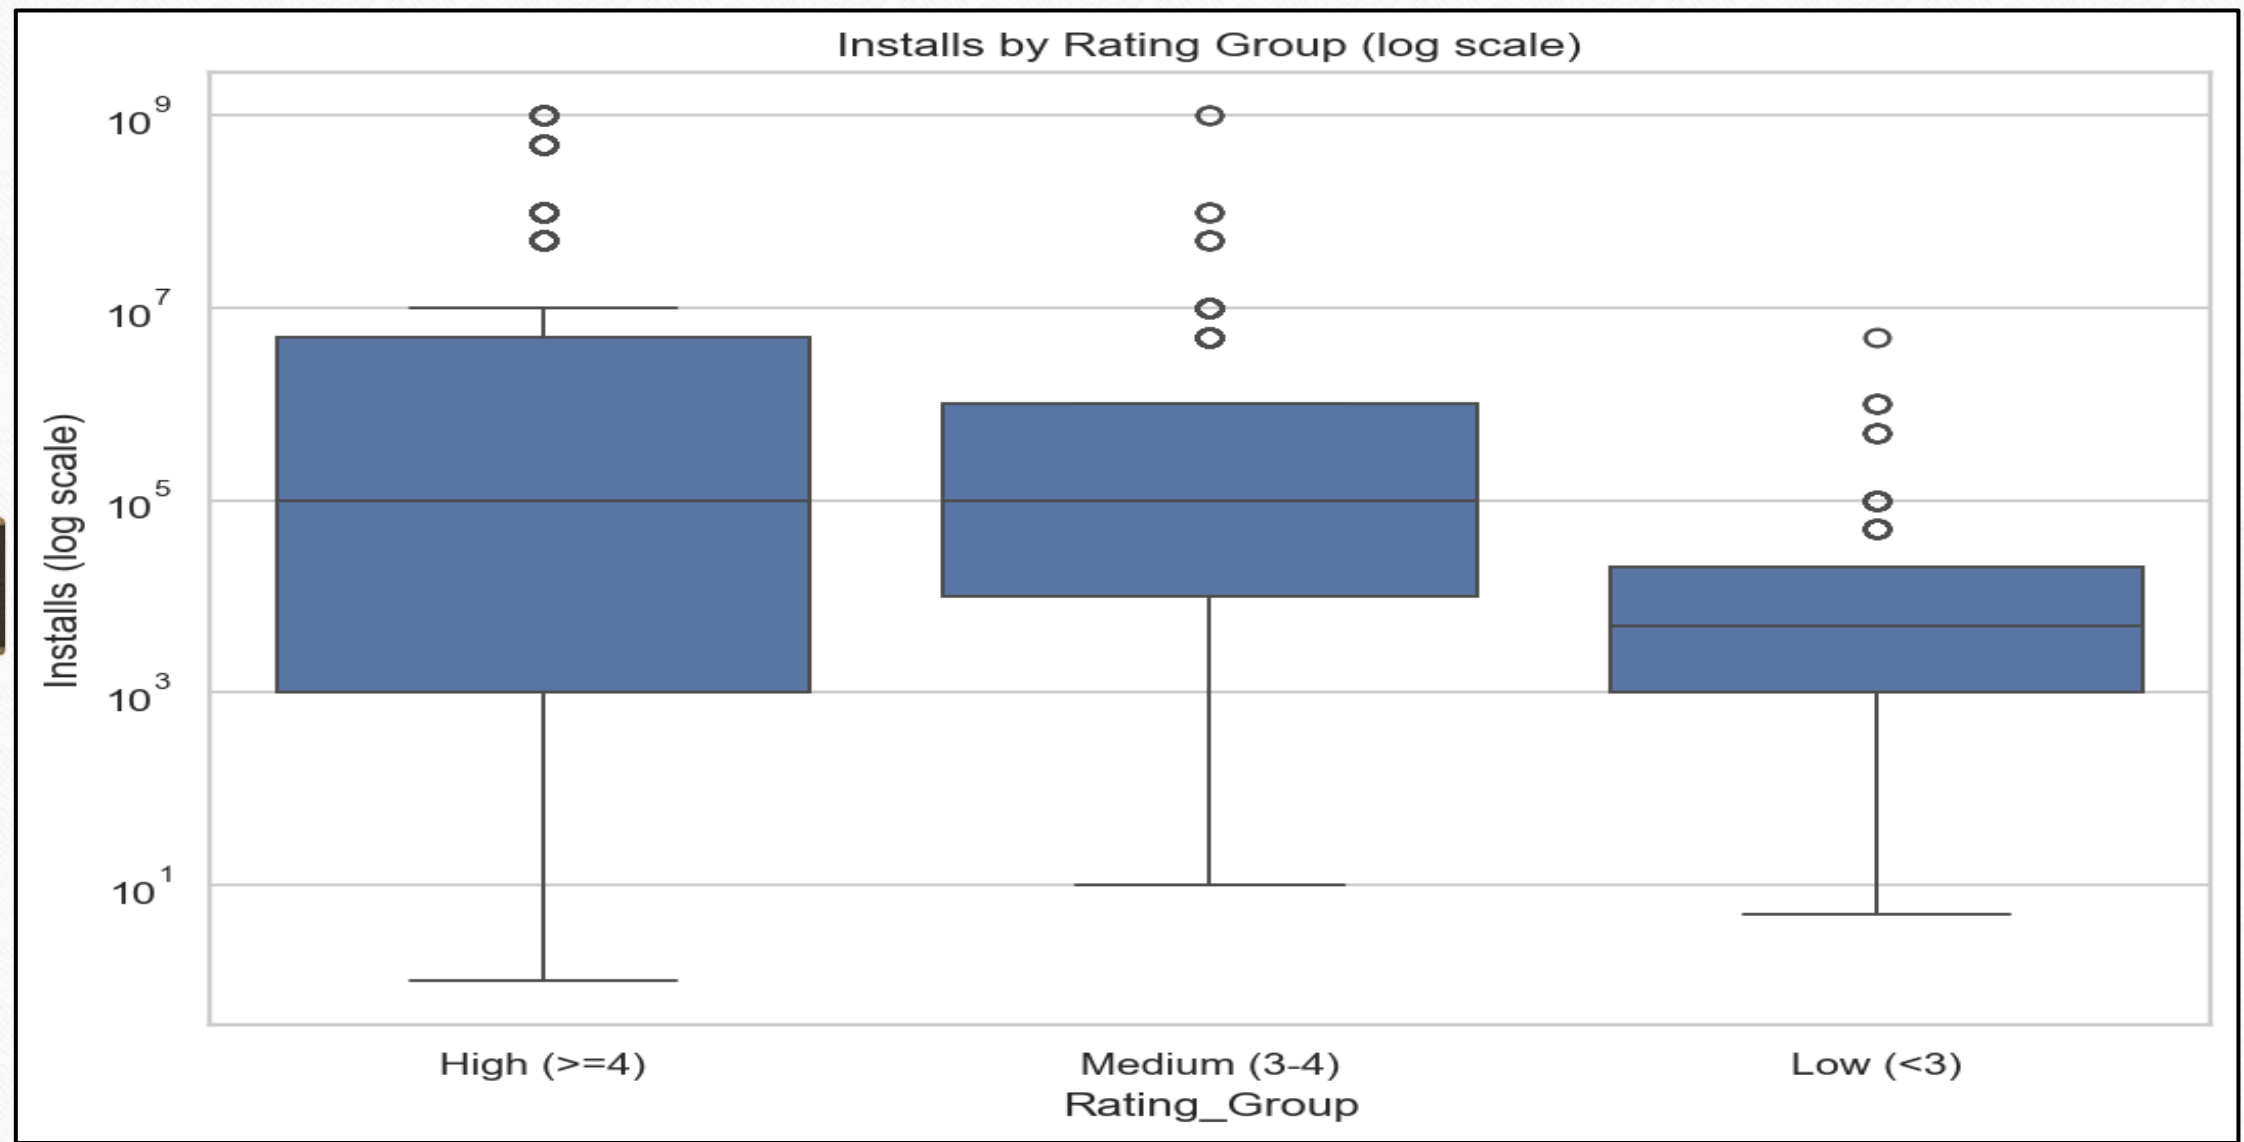

# Installs by Rating Group

---

- High-rated apps ( $\geq 4$ ) have significantly more installs
- Low-rated apps have limited reach

# Top 10 Categories by Average Installs

---

- Game, Communication, and Social apps dominate install counts
- Utility apps have lower but consistent installs

Top 10 Categories by Average Installs

# Apps Updated per Year

---

- Peaks in recent years — indicates active development
- Some old apps remain un-updated for long

Number of Apps Updated per Year

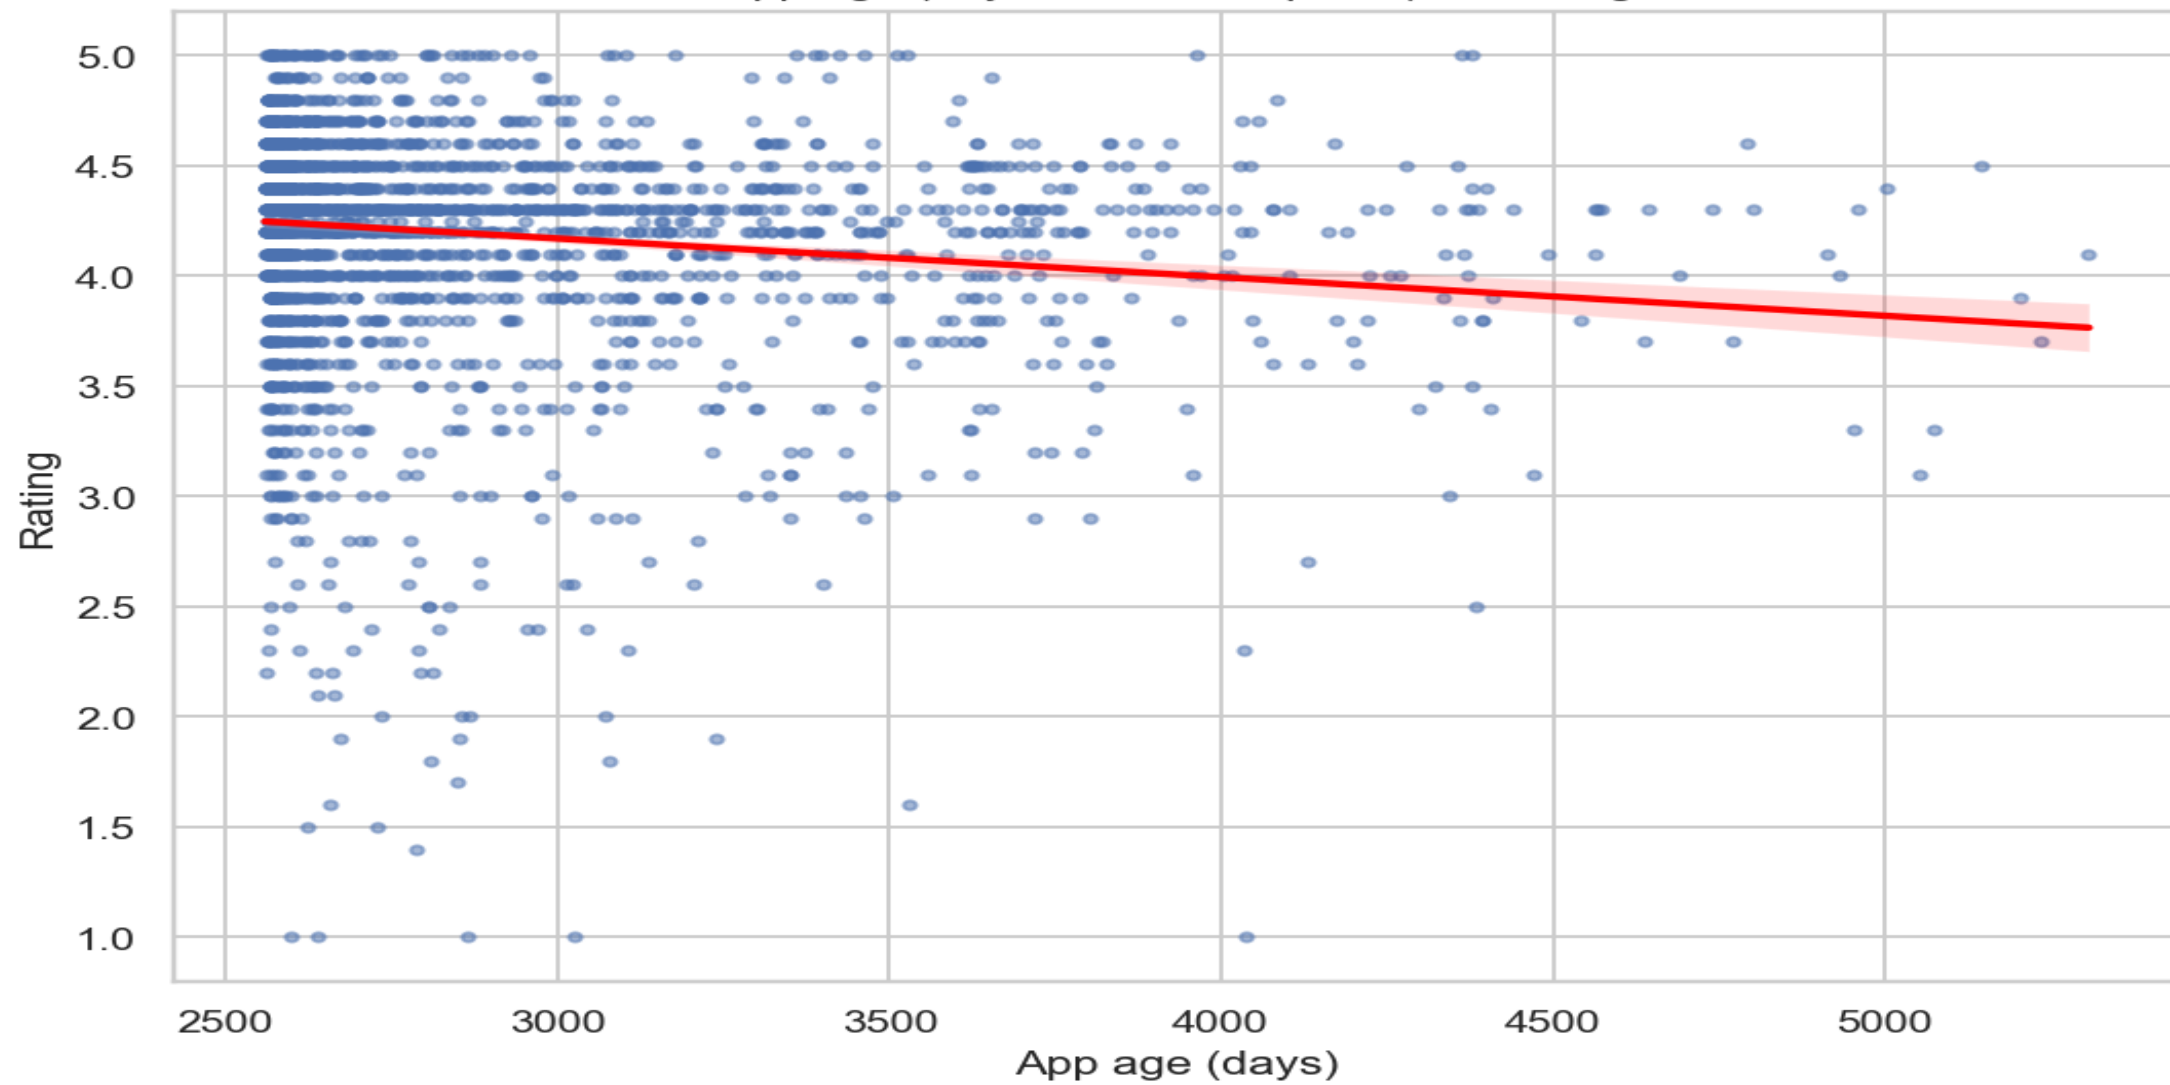

# App Age vs Rating

---

- Slight negative correlation: older apps tend to have lower ratings
- Frequent updates may boost ratings

App Age (days since last update) vs Rating

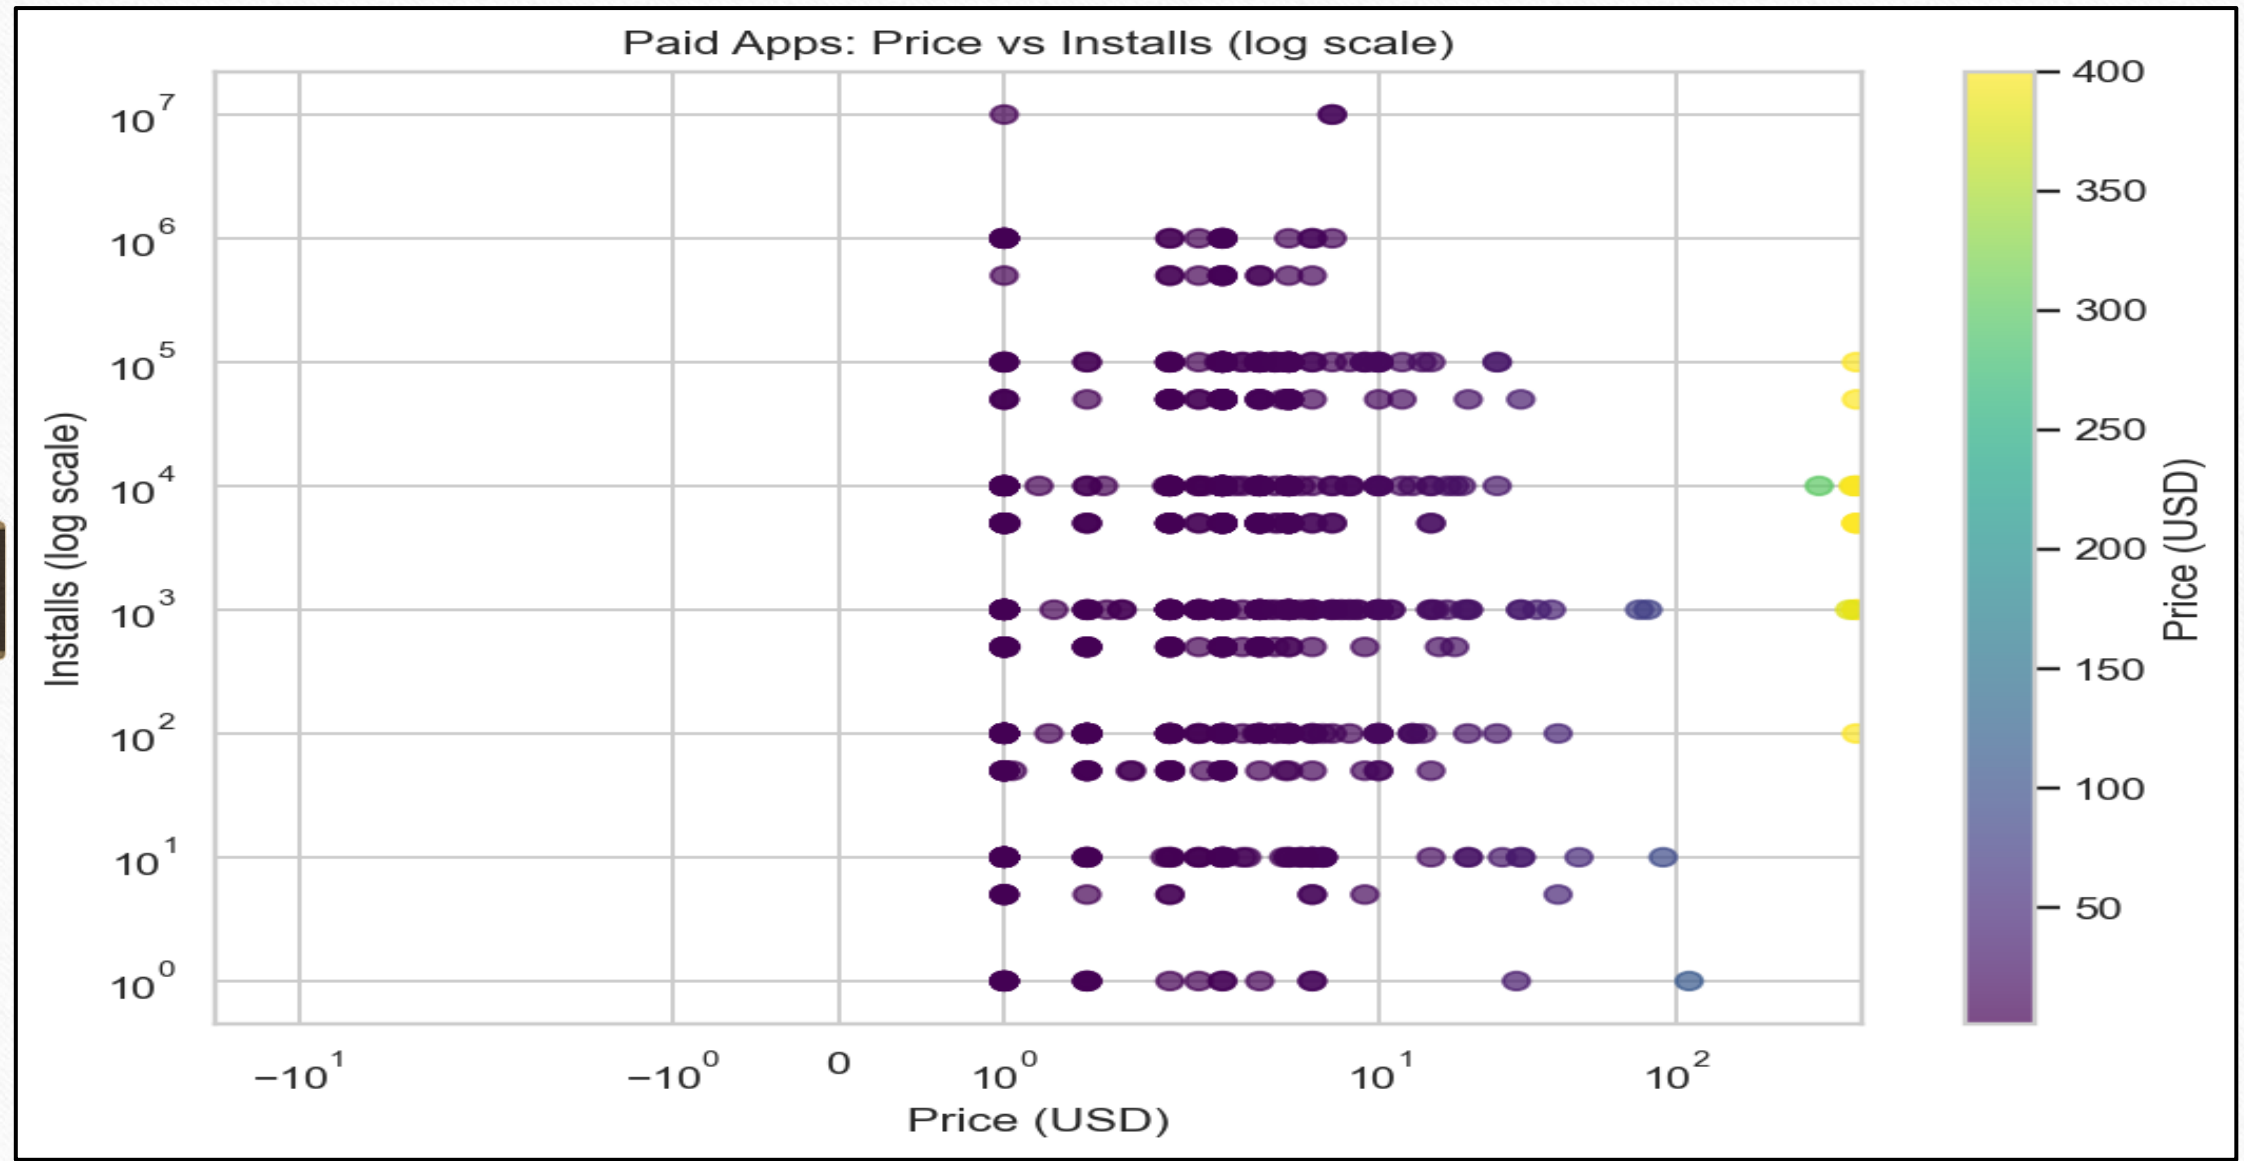

# Paid Apps: Price vs Installs

---

- Higher-priced apps have very low installs
- Most paid apps cluster below \$10

# Installs per MB Distribution

---

- Some apps achieve very high installs per MB (efficient)
- Large inefficient apps may struggle with adoption

Installs per MB (filtered)

# Numeric Correlation Heatmap

---

- Reviews and Installs strongly correlated
- Price has negative correlation with installs

# Conclusion & Recommendations

---

- Developers should focus on user ratings & frequent updates
- Consider app size optimization for wider reach
- Paid apps should balance price & value

**Thank you!**
